

# How well do you know your compressed air system?

Bill, a maintenance manager of a distribution center, needed to double his facility's production and assumed he needed to buy more air compressors.

He called Kaeser for pricing on a new system. After a few questions we determined a new compressor might not be necessary.

After a no-hassle Air Demand Analysis (ADA) we showed him the following:

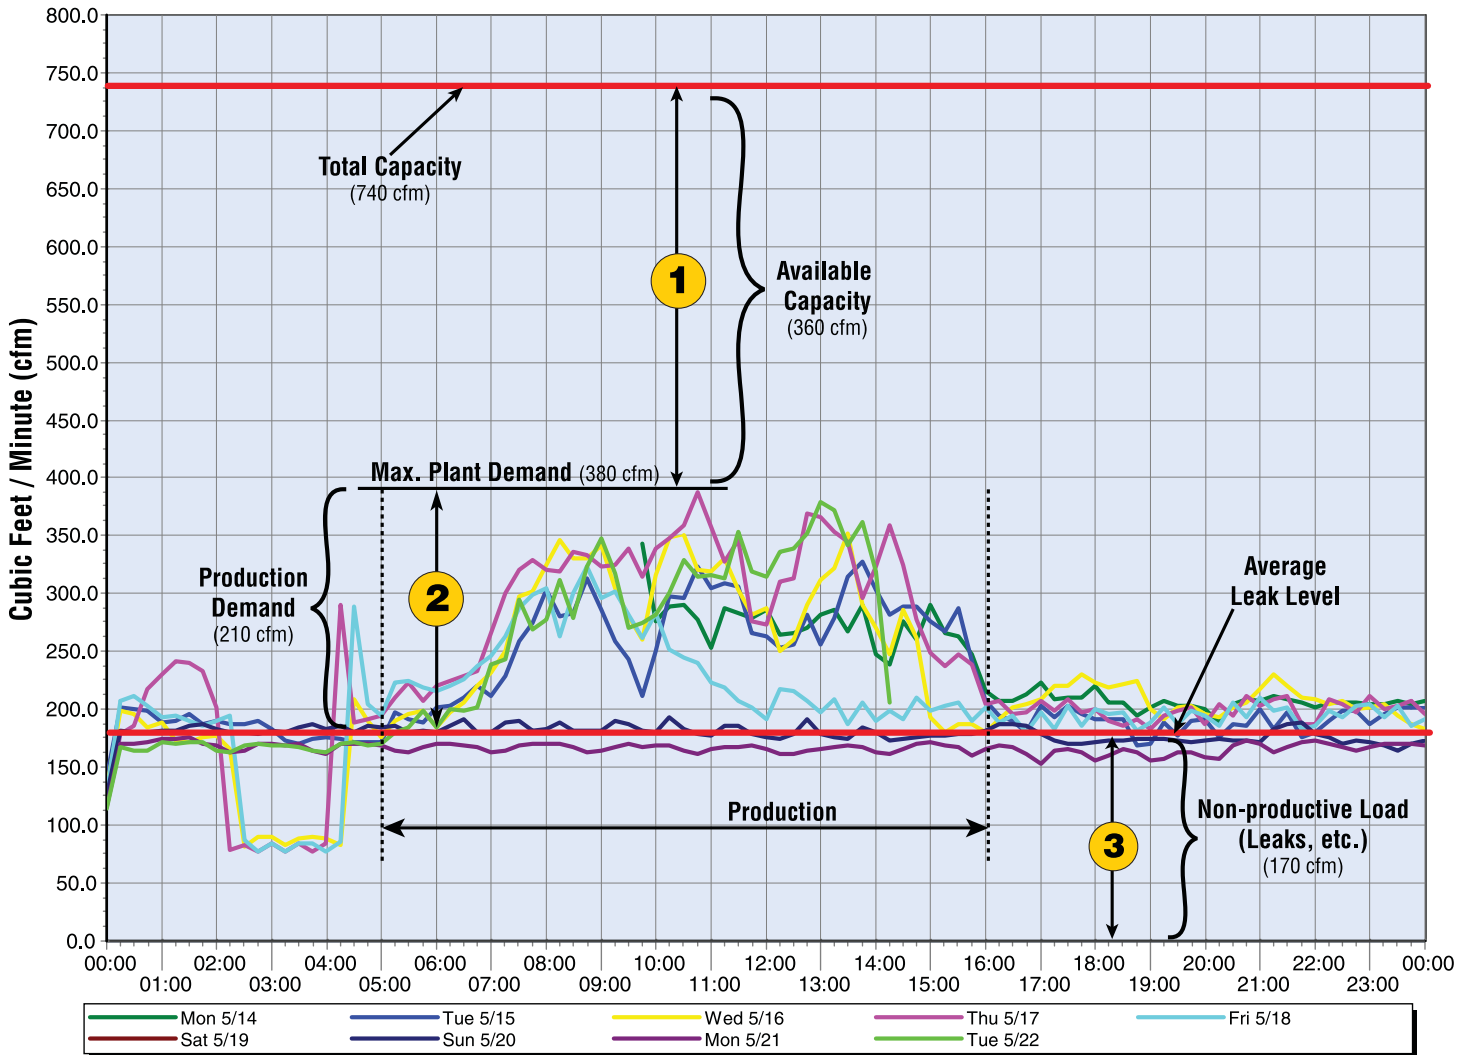

- 1** He was using only half the total air available from his existing system
- 2** His peak production demand was under 30% of his available capacity
- 3** Leaks, artificial demand, and other non-productive factors were responsible for most of his air consumption

We saved Bill the cost of purchasing new compressors and helped lower his energy consumption.

## What can we show you?

# Air Demand Analysis

This is actual data from a 100,000 square foot distribution center.
